2. M^3: A Multi-LLM System for Multi-Turn Jailbreaking as a Markov Decision Process

arXiv lists a paper titled $M3$: A Multi-LLM System for Multi-Turn Jailbreaking as a Markov Decision Process.

Evidence: We address this gap by introducing $M3$, an automated red-teaming framework that formalizes multi-turn jailbreaking as a finite-horizon Markov Decision Process (MDP).

Impact: Teams can evaluate the documented arXiv workflow before wider rollout.

Watch next: Verify [2610.31937] $M3$: A Multi-LLM System for Multi-Turn evidence, access limits, and the next source update.

3. PaperFormalizer: Author-in-the-Loop Autoformalization of Research Papers in Lean

arXiv lists a paper titled PaperFormalizer: Author-in-the-Loop Autoformalization of Research Papers in Lean.

Evidence: We introduce PaperFormalizer, a Lean-based agentic pipeline that helps authors find and close such gaps in their own papers and turn each paper into a Lean-verified version.

Impact: Teams can evaluate the documented arXiv workflow before wider rollout.

Watch next: Verify [2610.31810] PaperFormalizer: Author-in-the-Loop evidence, access limits, and the next source update.

4. Anthropic files S-1 with the SEC for proposed initial public offering

Anthropic is an AI safety and research company that's working to build reliable, interpretable, and steerable AI systems.

Evidence: The Anthropic release records S-1 for Anthropic.

Impact: Teams can evaluate the documented Anthropic workflow before wider rollout.

6. Don't Forget What You Just Learned: Self-Directed Repair Turns Agent Mistakes Into Lasting Lessons

Yet today's agents recover from a mistake only temporarily: in-context reflections are easily forgotten acr.

Evidence: The arXiv coding-agent research feed release records 2610.31846v1 for arXiv.

Impact: Teams can evaluate the documented arXiv workflow before wider rollout.

7. Development of an automated method for audiometric data extraction and analysis using voting optical character recognition

Download PDF Abstract Hearing loss affects over 1.5 billion people worldwide, significantly impacting language development, quality of life, and economic independence.

Evidence: Research on audiometric data, such as pure tone audiometry (PTA), the speech reception threshold (SRT), and the word recognition score (WRS), is essential for understanding and preventing hearing loss.

Impact: Teams can evaluate the documented Nature workflow before wider rollout.

Watch next: watch availability, limits, and real usage.

A new Changes button in the session header shows the session's line counts and opens a pane listing the files changed in the last turn or across the whole session, with a diff of each.

Arxiv address this gap by introducing M^3, an automated red-teaming framework that formalizes multi-turn jailbreaking as a finite-horizon Markov Decision Process (MDP). In M^3, an attacker LLM interacts with a target LLM while operating over a compact internal state produced by a state LLM.

Arxiv introduce PaperFormalizer, a Lean-based agentic pipeline that helps authors find and close such gaps in their own papers and turn each paper into a Lean-verified version. Starting from the LaTeX source, PaperFormalizer transcribes the paper into a dependency graph of statements, audits each statement in natural language for faithfulness, ambiguity and correctness, and then formalizes and proves the statements in Lean against Mathlib, optional domain libraries and the author's personal toolkit. Only the author knows what a statement is meant to say and how a formalization gap in a result is best fixed.
